Lab: Processing Parallel

sargv); Initialize MPI depending on parameter given on cmd MPI Init (sarge,

update value 'myrank' to match MPI smyrank); MPI_Comm_rank(process rank this MPI

&numprocs); update value 'numprocs' to match MPI number of process MPI_Comm_size(MPI COMM WORLD,

&namelen); MPI Get processor name resultien [out] processor name,

Length (in characters) of the name.

argc [in, optional]
A pointer to the number of
arguments for the program.
This value can be NULL.

argv
A pointer to the argument list for the program. This value

can be NULL

MPI Finalize();

environment. execution

MPI process's Terminates the On return, a pointer to the identifier of the calling process within the

group of the communicator.

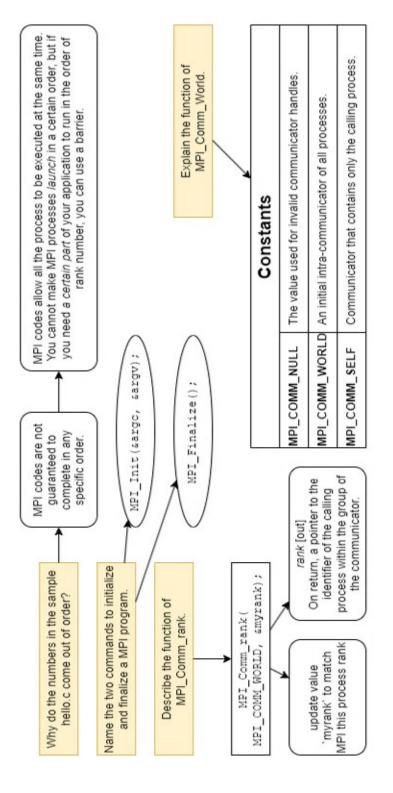

myrank [out]

On return, indicates the number of processes in the group for the communicator size [out]

A unique specifier for the actual (as opposed to virtual) node. This must be an array of size at least MPI_MAX_PROCESSOR_NAME name

mpirun -np 4 . /hello mpicc hello, c -o hello

2 qer ab: Processing arallel \Box

Lab: Processing Parallel

Performs a standard mode send operation and returns when the send buffer can be safely reused

MPI_Send(&buf, BUFSIZ MPI_CHAR, 0, 19, MPI_COMM_WORLD);

The rank of the destination process within the communicator that is specified by the comm parameter. BUFSIZE, message tag 19, value of &buf slicing into 0-BUFSIZE, type send to process 0,

A pointer to the buffer that contains the data buf [in, optional] to be sent

buffer. If the data part of the message is empty, set the count parameter to 0. The number of elements in the count

elements in the buffer. The data type of the datatype

The message tag that can be used to distinguish different types of

The handle to the communicator. comm

messages

char

Performs a receive operation and does not return until a matching message is received

MPI_Recv(abuf, BUFSIZE, MPI_CHAR, MPI_ANY_SOURCE, 19, MPI_COMM_WORLD);

A pointer to the buffer that contains the data buf [in, optional] to be sent.

message is empty, set the count The number of elements in the buffer. If the data part of the parameter to 0.

elements in the buffer. The data type of the datatype

> listen to MPI COMM message with tag 19 to be update into buf and wait until any

MPI_ANY_SOURCE constant to specify that any source is acceptable. The rank of the sending process within the specified communicator. Specify the source

Specify the MPI_ANY_TAG constant to indicate that any tag is acceptable. distinguish different types of messages The message tag that is used to

The handle to the communicator. comm

Broadcasts data from one member of a group to all members of the group

BUFSIZE MPI

process 0 -> MPI Send(sbuf, BUFSIZE, MPI INT, 0, xx, MPI_COMM_WORLD); MPI

other process ->
I Recv(sbuf, BUFSIZE,
NPI INT, 0, xx,
MPI COMM WORLD);

Duffer [in, out]

The pointer to the data buffer. On the process that is specified by the roof parameter, the buffer contains the data to be broadcast. On all other processes in the communicator that is specified by the comm parameter, the buffer receives the data broadcast by the roof process.

the count parameter is zero, the data part of The number of data elements in the buffer. the message is empty.

The rank of the process that is sending the data. root [in]

datatype [in] The MPI data type of the elements in the send buffer.

The MPI_Comm communicator handle. comm [in]
